1 March 2023

Word Count: 2915

Executive Summary

Main Issues: MP & RP

This research addresses Marriott International's marketing problem (MP) of expanding its global presence while maintaining customer satisfaction and brand loyalty. The research problem (RP) focuses on three major areas: identifying emerging travel trends and destination preferences, evaluating guest satisfaction across different brands and segments, and determining the impact of loyalty programs and sustainability initiatives on customer loyalty.

Research Approach

A descriptive research design is implemented, combining quantitative surveys with qualitative focus groups. Data will be collected from a global sample of 5,000 Marriott and competitor customers. The study will utilize statistical approaches such as regression analysis, factor analysis, ANOVA, and cluster analysis to derive insights.

Expected Results: RQ & RH

The research will identify substantial travel trends like nature immersion, adventure tourism and cultural exploration while revealing regional preferences for personalized services such as mobile check-in in tech-savvy areas and tailored dining in Europe. In addition, it will measure loyalty program impact by demonstrating that a 1-point rise in perceived benefits boosts customer loyalty scores by 6-points.

Solving the MP

Findings from this study will help Marriott optimise its service offerings, improve loyalty programs, and implement targeted sustainability initiatives. By aligning its strategies with customer preferences and emerging market trends, Marriott can strengthen customer retention, distinguish itself from competitors and achieve sustainable global growth.

Background

The hospitality industry is extremely competitive, with major companies like Hilton and Hyatt competing for market share through service quality, loyalty programs, and expansion. Marriott International, founded in 1927, operates over 8,000 properties across 139 countries, offering luxury, premium, and select-service hotels. Strategic acquisitions like Starwood Hotels and the Bonvoy loyalty program have strengthened its position. However, Marriott faces challenges like economic fluctuations, evolving travel trends and changing customer expectations.

Data from 5,000 Marriott customers globally, as well as competitor insights, will be analysed using statistical approaches such as regression analysis, factor analysis, ANOVA, and cluster analysis. The objective is to identify important improvement areas and growth opportunities in the hospitality industry. Based on findings, the study will provide some recommendations to enhance Marriott's competitive advantage and flexibility in a dynamic market.

Problem Definition

Marriott International intends to expand its global presence by increasing hotel properties and diversifying its brands. To achieve this, the company delivers excellent guest experiences through technology and personalised services while emphasising sustainability and social responsibility to boost customer loyalty. This research seeks to understand guest preferences, identify emerging travel trends, and evaluate the impact of sustainability initiatives on customer loyalty.

Marketing Problem (MP) and Research Problem (RP)

The marketing problem (MP) for Marriott International is to achieve successful global expansion while maintaining customer satisfaction and brand loyalty. As the company grows, it must cater to diverse customer needs, differentiate itself from competitors, and leverage technology for better service delivery.

To tackle MP, the research problem (RP) concentrates on three important areas:

1. Identifying emerging travel trends, destination hotspots, and how economic factors shape travel behaviour.
2. Evaluating guest satisfaction across different brands and operating segments while understanding customer preferences for personalized services and technology.
3. Assessing the effectiveness of loyalty programs and the impact of sustainability initiatives on customer loyalty across demographics.

The RP supports the MP by providing information about customers values which enables Marriott to tailor its service offerings and differentiate itself in a competitive market. Furthermore, personalised services and sustainability initiatives help to retain customer which can support long-term brand loyalty and is essential for sustaining global growth.

Literature Review

Research highlights the importance of customer experience and loyalty. Personalised services and technology integration enhance customer experience (Buhalis and Sinarta ,2019).

Emerging trends like cultural and historic immersion influence consumer behaviour (Chen & Rahman, 2018). Consumers favour socially responsible brands which make sustainability initiatives important for loyalty (Han & Yoon, 2015). Economic factors such as budget constraints influence travel behaviour across luxury and budget segments (Karl, M., Bauer, A., Ritchie, W. B., & Passauer, M. ,2020). These findings are consistent with Marriott's research objectives and provide a framework for further investigation.

Research Objectives

For RP 1:

RQ1a: What is the latest consumer demands and popular destination hotspots?

RH1a: The emerging consumer desires include:

- Nature Immersion: Travelers seek scenic and eco-friendly experiences.
- Themed Accommodations: Interest in fantasy-based stays (e.g., anime-themed castles).
- Cultural Exploration: Demand for deep cultural experiences.
- Popular Hotspots: Switzerland (Alpine region), England (theme parks), and Dali City in China

RQ1b: What are the emerging travel trends?

RH1b: The main travel trends are nature immersion, adventure tourism, therapeutic vacations, event-driven travel, entertainment hub vacations and facility-based tourism.

RQ1c: What is the relationship between budget and travel behaviour?

RH1c:

- High-budget customers prefer luxury stays with modern amenities (e.g., skiing in the Alps).
- Low-budget customers prefer nature-focused experiences with minimal infrastructure (e.g., jungle resorts in Indonesia).

Marriott wants to broaden its global presence and brand variety. Understanding these trends allows Marriott to identify high-demand travel experiences and strategically develop properties in important locations. By segmenting customers based on budget preferences, Marriott can tailor offerings and pricing strategies to maximize revenue and market attractiveness.

For RP 2:

RQ2a: Which personalized services are most attractive in different regions?

RH2a:

- Tech-Savvy Regions (US, Canada, Asia): Mobile check-in, digital room controls.
- Europe: Personalized dining services.
- Middle East & Africa: Luxury accommodation with advanced room controls.

RQ2b: How does guest satisfaction vary across different brands and operating segments?

RH2b:

- Luxury and extended-stay brands (e.g., JW Marriott, Residence Inn) have higher guest satisfaction than premium and select-service brands due to the personalized service and features.
- US and Canada show higher satisfaction scores due to technology integration.

RQ2c: What new personalized services do customers desire?

RH2c:

- Corporate Travelers: AI-powered meeting rooms, holographic meetings, AR boards.
- Leisure Travelers: VR adventure zones, rooftop dining, AI-powered spas, outdoor cinemas.

Marriott uses technology and personalisation to enhance guest experiences. By analysing regional preferences, the company conducts targeted service improvements that each brand provides a personalized experience that boosts happiness, loyalty, and revenue.

For RP 3:

EQ3a: What are the key benefits of Marriott Bonvoy membership?

EA3a: Guests value free stays, late checkout, priority check-in and lounge access.

RQ3a: What sustainability initiatives can improve guest loyalty?

RH3a: Environment: Reducing carbon footprint, conserving water, implementing recycling programs, minimizing food waste, using eco-friendly materials and wisely utilizing renewable energy.

Social: Offering volunteering programs, supporting local businesses, providing aid to underprivileged groups (such as old folks' homes and orphanages), ensuring a safe work environment and providing scholarships and education support.

RQ3b: How do loyalty benefits affect customer loyalty scores?

RH3b: A 1-point increase in loyalty benefits leads to a 6-point increase in customer loyalty scores.

RQ3c: Which sustainability initiatives impact guest loyalty?

RH3c: Cluster 1 (Community Engagement): Volunteering, supporting local businesses and donating to underprivileged groups.

Cluster 2 (Education Support): Scholarships, child welfare programs and school funding.

Cluster 3 (Employee Welfare): Workplace safety, retirement and healthcare benefits.

Marriott hopes to increase customer loyalty through its Bonvoy program and sustainability initiatives. Understanding which loyalty benefits generate retention allows Marriott to improve its rewards strategy. Furthermore, leveraging sustainability initiatives enhances brand reputation, attracts environmentally conscious customers and fosters long-term guest engagement.

Research Design

Information Collection

The research will collect information on guest preferences for personalized services, technology use, emerging travel trends, popular destinations, and satisfaction levels across Marriott's brands and regions. It will also examine the effect of sustainability initiatives on loyalty, explore demographic preferences, and evaluate the effectiveness of loyalty programs. In addition, economic issues affecting travel behaviour will be analysed to help Marriott adapt to market changes. This information will support Marriott's goals of improving guest experiences, growing globally and advancing sustainability efforts.

Research Design and Methods

This study uses a descriptive research design to collect and assess customer preferences and behaviours. A mixed-method approach combining quantitative surveys and qualitative focus groups will be employed:

- **Online Surveys:** The primary data collection tool for Marriott and competitor customers worldwide. Surveys will include Likert scales, ranking questions, and multiple-choice responses to evaluate satisfaction, preferences, and loyalty.
- **Focus Groups:** This approach should be conducted with selected participants to understand their travel preferences and expectations for personalized services, providing qualitative context to survey findings.
- **Statistical Analysis:** Factor analysis identifies emerging travel trends, regression analysis assesses the impact of budget on travel behaviour, ANOVA compares satisfaction across segments and cluster analysis groups sustainability initiatives that affect loyalty.

Justification for Excluded Methods

- 1. In-depth interviews: This method is useful for understanding personal experiences but it is time-consuming and may not provide enough data for statistical analysis.
- 2. Experimental research: This study is unsuitable for experimental research as it observes real-world preferences without changing variables in a controlled environment.
- 3. Ethnographic research: Although useful for deep behavioural perspectives, it is not feasible for Marriott’s large and global customer base.

Variables and Scaling Techniques

The study will use multiple scaling techniques that correspond to the survey form. The variables, measurement scales, and data types are summarized in the following table:

Variable	Measurement Scale	Data Type
Destination choices	Multiple-choice (Checkbox)	Categorical
Interest in travel experiences	Five-point Likert scale	Ordinal
Preferred travel budget	Categorical (Low, Mid, High)	Categorical
Guest satisfaction	1 to 10 Rating Scale	Ordinal
Personalization preferences	Five-point Likert scale	Ordinal
Loyalty program effectiveness	Five-point usefulness scale	Ordinal
Sustainability initiatives	Five-point agreement scale	Ordinal

Table 1: List of Data Collected

Questionnaire Design and Intent

The questionnaire is divided into three sections to cover different research dimensions:

Section A: Travel Preferences and Trends

This section identifies consumer preferences for various travel experiences and destination hotspots. It combines ranking and checklist questions to understand destination preferences and emerging travel trends which helps Marriott align its offerings with consumer demands.

Section B: Personalized Services and Guest Experience

This section assesses interest in various hotel services such as AI-powered features and premium options. A five-point Likert scale is used to determine the levels of interest that reveal how technology and personalized services can enhance guest satisfaction.

Section C: Loyalty Programs and Sustainability

This section evaluates customer loyalty scores and the effectiveness of loyalty benefits. It also assesses sustainability initiatives using a five-point agreement scale, allowing Marriott to understand how sustainability initiatives influence customer loyalty.

The questionnaire is designed to capture both customer demands and actual experiences which ensure alignment with Marriott's strategic goals. The structured format enables effective statistical analysis while the focus groups provide depth to consumer insights.

Data Collection

Sample Size Determination

According to the case study brief, the research will include at least 5,000 Marriott International customers globally to ensure reliable and exact survey estimates. A similar sample size for competitor customers will be determined using incidence rates and expected response rates. Adjustments will be made for non-response and incomplete surveys to maintain the statistical robustness of the data.

Sample Size Calculation

For Marriott Customers

The sample size for the survey was calculated using the formula for determining the sample size for a proportion:

$$n = \frac{Z^2(p(1 - p))}{e^2}$$

Where:

n = required sample size

Z = Z-score for the desired confidence level (1.96 for 95% confidence)

p = estimated proportion of the population (assumed to be 0.5 for maximum variability)

e = margin of error (we use $e = 0.02$ for a $\pm 2\%$ margin of error)

Substituting the value:

$$n = \frac{(1.96)^2 \times 0.5 \times (1 - 0.5)}{(0.02)^2} = 2,401$$

This calculation indicates that 2,401 respondents are needed to achieve a 95% confidence level with a $\pm 2\%$ margin of error. However, this assumes a 100% response rate, which is unrealistic.

Adjusting for Incidence and Completion Rates

To account for real-world response rates, the sample size was adjusted using the following formula:

$$n_{adjusted} = \frac{n}{Incidence\ Rate \times Completion\ Rate}$$

Assuming an incidence rate of 70% (percentage of eligible respondents) and a completion rate of 80% (percentage of eligible respondents who complete the survey), the adjusted sample size is:

$$n_{adjusted} = \frac{2,401}{0.70 \times 0.80} = 4,288$$

The required sample size for Marriott customers is 4,288, but it is rounded up to 5,000 to account for response rate variation and ensure robustness.

For Competitor Customers

Adjusting for Incidence and Completion Rates

Assuming an incidence rate of 60% (percentage of eligible respondents) and a completion rate of 70% (percentage of eligible respondents who complete the survey), the adjusted sample size is:

$$n_{adjusted} = \frac{2,401}{0.60 \times 0.70} = 5,717$$

A sample size of 2,000 competitor customers is proposed as competitor data is mainly used for benchmarking rather than detailed analysis. This smaller sample still ensures sufficient for comparisons with a slightly higher margin of error of $\pm 2.2\%$.

Sampling Method

The sampling method involves stratified random sampling to ensure coverage across key segments such as geographic regions, brand types (luxury, premium, select-service), and customer types (leisure vs. corporate). The sampling frame will be created using Marriott's customer database which includes previous customers who have stayed at their properties.

A panel-based sample strategy will be leveraged for rival customers with third-party market research panels including consumers who have been at competitor hotels (e.g., Hilton, Hyatt, Accor).

Rejection of Other Sampling Methods

1. Convenience Sampling: This is rejected due to potential bias as it may not represent the broader customer base.
2. Snowball Sampling: This is rejected because it relies on referrals which may not capture a diverse range of customers.
3. Cluster Sampling: This is rejected as it may not accurately reflect the population.

Use of Customer and Operational Data

Marriott's customer database will be used to stratify the sample and ensure representation across different brands and regions.

Operational data such as customer satisfaction scores and loyalty program usage will be used to validate survey findings and provide context for research.

Fieldwork Execution

- **Online Survey:** The survey will be distributed via email to Marriott's customer database and through third-party panels for competitor customers. It will utilise Likert scales, multiple-choice questions, and open-ended questions to collect both quantitative and qualitative data. To ensure global accessibility, the survey will be available in multiple languages.
- **Focus Groups:** Virtual focus groups will provide detailed insights into emerging travel trends and preferences for personalized services. Participants will be selected from survey respondents interested in further research.

Six focus groups of 8-10 participants each will be conducted across North America, Europe, and Asia, ensuring diverse viewpoints from both Marriott customers and non-customers. The selection process is based on demographics and travel behaviour. Discussions will include brand perceptions, personalized services and feedback on sustainability and loyalty programs. Findings will help refine survey questions and analyse results that provide further information on data privacy and loyalty program awareness.

Data Analysis

To address Marriott International's research objectives, the following multivariate statistical analysis techniques are proposed: Factor Analysis, Regression Analysis, ANOVA, and Cluster Analysis.

1. Factor Analysis

Factor analysis identifies important components of personalized services (RQ2a) and emerging travel trends (RQ1a) by reducing variables into a smaller set of factors that capture underlying patterns.

For Personalized Services, it will group services like mobile check-in, digital room controls and personalized dining into broader categories based on guest preferences, illustrating regional variations (e.g., US & Canada, Europe, Middle East & Africa). For Travel Trends, it will categorize trends such as nature immersion, adventurous escapes, and therapeutic vacations into broader themes, enabling tailored offerings.

Expected Results

Factor loadings will indicate the strength of each service or trend within factors. For instance, mobile check-in may score highly in the US & Canada, while personalized dining may dominate in Europe.

Justification

Results will help Marriott prioritize region-specific services and trends which support the hypothesis that preferences vary by region (RH2a).

Factors (Region) Variables (Personalized Service)	F_1 (US & Canada)	F_2 (Europe)	F_3 (Middle East & Africa)	F_4 (Asia)
v_1 Mobile Check-In				
v_2 Digital Room Controls				
v_3 Personalized Dining Options				
v_3 Customized Room Service Menu				
v_4 AI-Powered Meeting Rooms				

Table 2: Factor Loadings between Personalized Services and Regions

- Value ranges from 1 to -1
- Values closer to 1 indicate a strong relationship.
- Values closer to 0 indicate a weak or no relationship.

2. Regression Analysis

Regression analysis will model the relationship between budget and travel behaviour (RQ1b) and evaluate the impact of loyalty programs on customer loyalty scores (RQ3b).

For Budget and Travel Behaviour, a multiple regression model will predict how budget (low, mid, high) influences destination choice, accommodation type, and activities. The dependent variable (DV) is travel behaviour, and the independent variable (IV) is budget. For Loyalty Programs, linear regression will assess how benefits like free stays and discounts impact loyalty scores. The DV is loyalty scores, and the IVs are loyalty program features.

Expected Results

Regression coefficients will reveal the strength and direction of relationships. Higher budgets may correlate with luxury accommodation, while loyalty benefits like free Wi-Fi may significantly boost loyalty scores.

Justification

Results will support hypotheses that budget influences travel behaviour (RH1b) and specific loyalty features enhance customer loyalty (RH3b).

Dependent Variable (Travel Behavior)	Independent Variable (Budget)	Coefficient (β)	p-value
Destination Choice	Low		
	Mid		
	High		
Accommodation Type	Low		
	Mid		
	High		

Table 3: Regression Coefficients for Budget and Travel Behaviour

- Presents regression coefficients for budget levels (low, mid, high).
- Positive coefficients indicate higher budgets lead to more expensive destinations.
- Negative coefficients indicate the opposite.

3. ANOVA (Analysis of Variance)

ANOVA will assess differences in guest satisfaction across brands and operating segments (RQ2a). A two-way ANOVA will use guest satisfaction as the dependent variable (DV), with brand (e.g., JW Marriott, Residence Inn) and operating segment (e.g., US & Canada, Greater China) as independent variables (IVs). This will identify significant variations in satisfaction levels.

Expected Results

F-statistics and p-values will reveal significant differences in satisfaction across brands and regions. For instance, luxury brands like JW Marriott may show higher satisfaction scores compared to select-service brands.

Justification

The results will support the hypothesis that guest satisfaction varies across brands and operating segments (RH2a).

Source of Variation	Sum of Squares	Degrees of Freedom	Mean Square	F-value	p-value
Brand					
Operating Segment					
Interaction					
Error					
Total					

Table 4: Two-Way ANOVA Results for Guest Satisfaction

- Significant Effects: Look for p-values < 0.05
- Non-Significant Effects: Look for p-values ≥ 0.05
- F-values: Higher F-values indicate stronger evidence against the null hypothesis (no effect).

4. Cluster Analysis

Cluster analysis will group sustainability initiatives based on their impact on customer loyalty (RQ3c). Hierarchical clustering will categorize initiatives (e.g., carbon footprint reduction, volunteering programs) into clusters, identifying which groups most effectively enhance loyalty.

Expected Results

The analysis will generate clusters such as environmental, social, and employee-focused initiatives, each linked to varying impacts on loyalty scores.

Justification

The results will support the hypothesis that specific clusters of sustainability initiatives enhance customer loyalty (RH3c).

Dendrogram: Sustainability Initiatives Based on Impact Scores

- Purpose: Visualizes hierarchical clustering of sustainability initiatives based on impact scores.
- Key Feature:
 - Height of Branches: Represents distance (dissimilarity) between clusters.
 - Lower height = Higher similarity.
 - Higher height = Lower similarity.
- Usefulness: Identifies natural groupings of initiatives based on similarity.

Further Research

To strengthen Marriott International's market position and meet evolving customer preferences, four innovative research ideas are proposed:

1. **AI-Driven Predictive Personalization** – This system analyses guest behaviour, social media activity, and real-time data to offer personalized recommendations. For example, a vegan customer could receive tailored dining suggestions and eco-friendly room settings which can increase satisfaction and loyalty.
2. **Virtual Reality (VR) Destination Previews** – Marriott offers VR experiences which allow potential guests to explore Marriott properties and local attractions before booking. This would assist customer such as families visiting Hawaii to make confident booking decisions.
3. **Gamified Loyalty Programs** – Guests may earn points for eco-friendly actions such as reusing towels or engaging in community activities. This would promote sustainability while increasing guest engagement and brand loyalty.
4. **Cultural Immersion Services** – Partnerships with local communities to offer activities like cooking classes, heritage tours, and craft workshops. This would attract customers interested in authentic cultural connections and differentiate Marriott from competitors.

Conclusion

The marketing problem (MP) for Marriott International is to ensure successful global expansion while maintaining customer satisfaction and brand loyalty. The research aims to identify emerging travel trends, evaluate guest satisfaction across brands and assess the impact of sustainability initiatives on loyalty. Expected results include understanding consumer preferences for personalized services, identifying high-demand travel experiences and determining which loyalty benefits and sustainability efforts enhance customer loyalty. These findings will enable Marriott to tailor its offerings, differentiate from competitors and strengthen its market position. By addressing these findings, Marriott can sustain global growth and adapt to evolving customer needs.

Have you stayed at any of the following locations or any Marriott International brands in the past three years?
(Marriott, The Ritz-Carlton, St. Regis, Sheraton, Westin)

YES

NO

During the past three years, have you stayed in any of the following locations?
(Hilton, Hyatt, InterContinental, Accor, Wyndham)

YES

NO

Kindly indicate the primary purpose of your stay.

LeisureBusiness

Section A :

Our goal is to design innovative staying experiences that address your unique needs. Kindly let us know your interests in the following stay options to help us personalize your

D1

Culinary exploration for food lovers

D2

Adventurous outdoor activities (rock climbing, cave exploring, surfing)

D3

Romantic celebration (anniversaries, proposals)

D4

Luxury retreat with spas and dining

D5

Cultural and historic immersion

D6

Event driven (weddings, gatherings, concert)

D7

Photography trip for scenic views

D8

Reunion stay with family and friends

D9

Weekend staycation for relaxation

D10

Urban experience for shopping and sightseeing
